微積分解法 2017レポート (6回目)

問 次の関数のマクローリン展開を求めよ。

$$f(x) = \sin^2 x$$

$$g(x) = \frac{1}{\sqrt{1-x}}$$

$$f(x) = \sum_{n=0}^{\infty} (-1)^n \frac{a^{2n+1}}{(a+n)!} x^{2n+2}$$

$$\boxed{(1)} = a$$

$$g(x) = \sum_{n=0}^{\infty} \frac{(bn-1)!!}{(bn)!!} x^n$$

$$\boxed{(2)} = b$$

$\square(1) = 2$

$\square(2) = 2$

$f(x) = \sin^2 x = \frac{1 - \cos 2x}{2}$

$\cos y = \sum_{n=0}^{\infty} \frac{(-1)^n}{(2n)!} y^{2n}$ これはおかし。

$= -\frac{1}{2} \sum_{n=1}^{\infty} \frac{(-1)^n}{(2n)!} (2x)^{2n}$

$= \sum_{n=0}^{\infty} (-1)^n \frac{2^{2n+1}}{(2n+2)!} x^{2n+2}$

$g(x) = \frac{1}{\sqrt{1-x}}$

$$\left\{ \begin{aligned} g'(x) &= -\frac{1}{2} (1+x)^{-\frac{3}{2}} \times (-1) \\ g^{(2)}(x) &= \left(-\frac{1}{2}\right) \left(-\frac{3}{2}\right) (1+x)^{-\frac{5}{2}} \times (-1)^2 \\ &\vdots \\ g^{(n)}(x) &= \left(-\frac{1}{2}\right) \left(-\frac{3}{2}\right) \cdots \left(-\frac{1}{2} - n + 1\right) (1+x)^{-\frac{1}{2} - n} (-1)^n \end{aligned} \right.$$

$$g^{(n)}(0) = \frac{(2n-1)!!}{2^n}$$

$$\begin{aligned} g(x) &= \sum_{n=0}^{\infty} \frac{1}{n!} \cdot \frac{1}{2^n} \cdot (2n-1)!! x^n \\ &= \sum_{n=0}^{\infty} \frac{(2n-1)!!}{(2n)!!} x^n \end{aligned}$$

(別解)

$$f(x) = \sin^2 x$$

$$f'(x) = 2 \sin x \cos x = \sin(2x)$$

$$\sin^{(n)}(x) = \sin\left(x + \frac{\pi}{2}n\right) \text{ であるから、}$$

$n=1, 2, 3, \dots$ のとき、

$$f^{(n)}(x) = 2^{n-1} \sin\left(x + \frac{\pi}{2}(n-1)\right)$$

$$f^{(n)}(0) = 2^{n-1} \sin \frac{\pi}{2}(n-1)$$

$$f^{(n)}(0) = 2^{n-1} \times \begin{cases} \sin 2\pi k = 0 & (n=4k+1) \\ \sin\left(\frac{\pi}{2} + 2\pi k\right) = 1 & (n=4k+2) \\ \sin(\pi + 2\pi k) = 0 & (n=4k+3) \\ \sin\left(\frac{3}{2}\pi + 2\pi k\right) = -1 & (n=4k+4) \end{cases}$$

($k=0, 1, 2, \dots$)

④

↑5K.

$$f^{(0)}(0) = f(0) = \sin^2 0 = 0.$$

↓7.

$$f(x) = \sin x = \sum_{k=0}^{\infty} \frac{(-1)^k x^{4k+1}}{(4k+1)!}$$

$$- \sum_{k=0}^{\infty} \frac{(-1)^k x^{4k+3}}{(4k+3)!}$$

$$= \sum_{m=0}^{\infty} \frac{(-1)^m x^{2m+2}}{(2m+2)!}$$
